

**CROOKSHANKITES: A NEW NAME FOR *DETTMANNITES* SINGH & KUMAR**

SINGH AND KUMAR (1972) established the genus *Dettmannites* (type species—*D. attenuarus*) for certain fossil sub-circular to oval, monolete, verrucate microspores recovered from the Jabalpur Formation of the Satpura Gondwana Basin, India. They were probably unaware that the generic name *Dettmanites* (type species—*D. ornatus*) had already been used by POCOCK (1970) to include triangular, more or less straight-sided, double-layered, trilete microspores with lipped laesurae and sexine thickened to form an equatorial girdle and extended at the apices in the form of pads or appendages. The orthographic error in '*Dettmanites*' Pocock was later corrected to '*Dettmannites*' by JANSONIUS AND HILLS (1976). Therefore, the name *Dettmannites* Singh & Kumar, being a later homonym of *Dettmannites* Pocock, is illegitimate under article 64.1 of the International Code of Botanical Nomenclature. To remedy this situation, it is now proposed to institute a new genus *Crookshankites* for inclusion of specimens placed so far under the genus *Dettmannites* Singh & Kumar.

***Crookshankites* gen. nov.**

1972 *Dettmannites* Singh & Kumar, non Pocock, 1970.

*Type Species*—*Crookshankites* (*Dettmannites*) *attenuarus* (Singh & Kumar, 1972) comb. nov.

*Diagnosis*—see Singh & Kumar, 1972, p. 172.

*Derivation of name*—The genus is named after the late H. Crookshank, who did pioneering work on the geology of the Satpura Basin.

***Crookshankites attenuarus* (Singh & Kumar) comb. nov.**
