ABSTRACT

Tiwari A. P., Khanna K. K. & Dubey P. C. 2015. Angiospermic diversity of Gandhi Sagar Wildlife Sanctuary, Madhya Pradesh, India. *Geophytology* 45(2): 139-151.

A list of angiospermic plants occurring in Gandhi Sagar Wildlife Sanctuary has been presented in the paper. Extensive collections were made in the area during different seasons from 2013 to 2014, and their subsequent identifications have revealed the occurrence of 502 species of angiosperms under 321 genera and 85 families in the sanctuary. Enumeration of each species along with the details of analysis of status of families, genera and species, dominant families, dominant genera, life forms and rare plants have been provided in the paper.

Key-words: Angiospermic diversity, Gandhi Sagar Wildlife, Madhya Pradesh.

INTRODUCTION

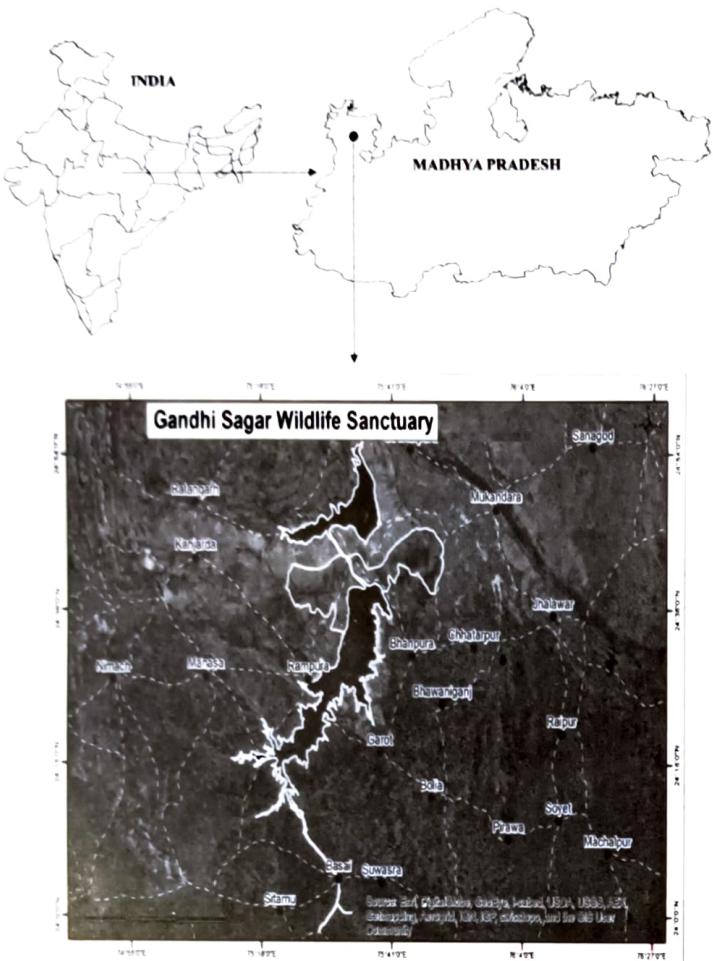

The protected areas are the important designated places for conservation of biodiversity in natural habitat indicating the richness of floristic composition. Gandhi Sagar Wildlife Sanctuary is located in Malwa plateau (Lat. 23°45'-25°2'N; Long. 74°42'-75°50'E) and covers an area of 368.62 km² in Mandsaur and Nimach districts of Madhya Pradesh (Text-figure 1). The Chambal River passes through the sanctuary and divides it into two parts; the western part is in Nimach district while eastern part is in Mandsaur district. Climate of the sanctuary is generally dry. There are three distinct seasons, viz., summer (March to June), winter (November to February) and rainy (July to September). During March to June, the average maximum temperature reaches up to 43°C and average minimum

temperature up to 27°C. November to February are the coldest months with 10°C as average minimum temperature.

FOREST TYPES OF THE SANCTUARY

The forests of the sanctuary can be broadly classified into three categories in accordance with Champion and Seth (1968).

1. Northern tropical dry mixed deciduous forests [5B/C2]: This type of forest occurs in the surrounding areas of Hinglaj Fort and some part of Rampur plateau of the sanctuary. The first storey of tree species include *Acacia catechu*, *Anogeissus latifolia*, *Albizia odoratissima*, *Boswellia serrata*, *Bridelia retusa*, *Buchanania lanzan*, *Butea monosperma*, *Diospyros melanoxylon*, *Haldina cordifolia*, *Kydia calycina*,

Text-figure 1. Location Map of Gandhi Sagar Wildlife Sanctuary

Lannea coromandelica, *Lagerstroemia parviflora*, *Phyllanthus emblica*, *Madhuca longifolia* var. *latifolia*, *Mitragyna parviflora*, *Soymida febrifuga*, *Sterculia urens*, *Terminalia alata*, etc. The second storey of small trees is dominated by plants such as *Acacia leucophloea*, *Bauhinia racemosa*, *Careya arborea*, *Cassia fistula*, *Gardenia latifolia*, *Flacourtie indica*, *Holarrhena pubescens*, *Wrightia tinctoria*, *Ziziphus mauritiana*, *Z. xylopyrus*, etc. The third storey consists of shrubs and undershrubs like *Desmodium velutinum*, *Flueggea virosa*, *Grewia flavescentis*, *Helicteres isora*, *Indigofera cassioides*, *Nyctanthes arbor-tristis*, *Petalidium barlerioides*, *Urena lobata*, *Waltheria indica*, *Ziziphus nummularia*, etc. The undergrowth is sparse and mainly constituted by *Achyranthes aspera*, *Ageratum conyzoides*, *Alysicarpus hamosus*, *A. vaginalis*, *Blainvillea acmella*, *Blepharis maderaspatensis*, *Canscora diffusa*, *Corchorus aestuans*, *Cyanthillium cinereum*, *Desmodium gangeticum*,

Dicliptera paniculata, *Emilia sonchifolia*, *Elephantopus scaber*, *Hybanthus enneaspermus*, *Indigofera cordifolia*, *I. tinctoria*, *Lagascea mollis*, *Lindernia crustacea*, *Melochia corchorifolia*, *Pentanema indicum*, *Pupalia lappacea*, *Tephrosia purpurea*, *Zornia gibbosa*, etc. and a large varieties of sedges and grasses like *Apluda mutica*, *Arundinella pumila*, *Capillipedium assimile*, *Cyperus spp.*, *Dichanthium annulatum*, *Eragrostis spp.*, *Fimbristylis spp.*, *Heteropogon contortus*, *Iseilema laxum*, *Oplismenus burmannii*, *Themeda quadrivalvis*, etc. Climbers are quite common in these forests and consist of *Abrus precatorius*, *Ampelocissus latifolia*, *Bauhinia vahlii*, *Cajanus scarabaeoides*, *Cryptolepis dubia*, *Cocculus hirsutus*, *Hemidesmus indicus*, *Ichnocarpus frutescens*, *Dioscorea bulbifera*, *Pergularia daemia*, *Millettia extensa*, *Mucuna pruriens*, *Ventilago denticalata*, *Ziziphus oenoplia*, etc. *Dendrophthoe falcata* is the most common parasite in this type of forest.

2. Dry Deciduous Scrub Forests [5/DS1]: The common plants recorded in this type of forests are *Acacia catechu*, *A. leucophloea*, *Anogeissus pendula*, *Balanites aegyptiaca*, *Butea monosperma*, *Dichrostachys cinerea*, *Dolichandrone falcata*, *Diospyros melanoxylon*, *Flacourtie indica*, *Holarrhena pubescens*, *Holoptelea integrifolia*, *Lagerstroemia parviflora*, *Mimosa himalayana*, *Ziziphus mauritiana*, etc. Common shrubs are *Carissa opaca*, *Calotropis procera*, *Capparis sepiaria*, *Woodfordia fruticosa*, *Ziziphus nummularia*, etc. Some of the common species growing as undergrowth are *Acanthospermum hispidum*, *Apluda mutica*, *Alysicarpus monilifer*, *Blepharis integrifolia*, *Bothriochloa glabra*, *Crotalaria prostrata*, *Cyanthillium cinereum*, *Digitaria ciliaris*, *Heteropogon contortus*, *Indigofera cordifolia*, *I. linifolia*, *Senna tora*, *Sida cordata*, *Triumfetta pentandra*, *Tridax procumbens*, *Oplismenus burmannii*, *Zornia gibbosa*, etc.

3. Anogeissus pendula forests [5/E1]: This type of forest is found in gentler slopes and top of low hills localities like Bagchach and Dhaga. The forests remain

leafless from March to May with a thin undergrowth of shrubs and grasses. These forests are dominated by *Anogeissus pendula* and other common members which include *Bauhinia recemosa*, *Butea monosperma*, *Dichrostachys cinerea*, *Diospyros melanoxylon*, *Lagerstroemia parviflora* and *Lannea coromandelica*. Undergrowth is mostly herbaceous and is conspicuous during the rainy season. Some of the common species growing as undergrowth are *Alysicarpus monilifer*, *Apluda mutica*, *Bothriochloa glabra*, *Cajanus scarabaeoides*, *Crotalaria prostrata*, *Cyanthillium cinereum*, *Digitaria ciliaris*, *Heteropogon contortus*, *Indigofera cordifolia*, *I. linifolia*, *Oplismenus burmannii*, *Senna tora*, *Sida cordata*, *Triumfetta pentandra*, *Tridax procumbens*, *Zornia gibbosa*, etc.

Apart from the above types of forests, grasslands are also found around Gandhi Sagar Dam of the sanctuary. Some of the common species found in these places are *Apluda mutica*, *Bothriochloa pertusa*, *Brachiaria ramosa*, *Capillipedium assimile*, *Cynodon dactylon*, *Dactyloctenium aegyptium*, *Dichanthium annulatum*, *D. foveolatum*, *Digitaria ciliaris*, *Dinebra retroflexa*, *Eragrostis* spp., *Heteropogon contortus*, *Iseilema laxum*, *Melanocenchrus jacquemontii*, *Pennisetum pedicellatum*, *Sacciolepis indica*, *Schoenefeldia gracilis*, *Setaria pumila*, *Sporobolus diandrus*, *S. tenuissimus*, *Themeda quadrivalvis*, *Vetiveria zizanioides*, etc.

The state of Madhya Pradesh has been botanically surveyed since 19th century and important contributions

have been made on the flora of the state by a number of workers (Pandeya 1952; Tiwari 1954, 1955, 1957, 1963; Maheshwari 1958; Tiwari & Maheshwari 1963; Sebastian & Balakrishnan 1963; Joseph 1963; Tiwari & Maheshwari 1965; Rao & Sastry 1965; Joseph & Vajravelu 1967; Balapure 1967; Kaushik 1971; Oommachan 1977; Tiwari 1979; Verma & Chandra 1981; Sharma & Mamgain 1983; Mukherjee 1984; Roy 1984; Lal et al. 1986; Khanna et al. 1991; Roy et al. 1992; Verma et al. 1993; Oommachan & Shrivastava 1996; Samvatsar 1996; Mudgal et al. 1997; Singh et al. 2001; Khanna et al. 2001) but no effort has been made to work out the floristic account of the Sanctuary separately. It is also worth mentioning here that the Convention on Biological Diversity (CBD) and the Biological Diversity Bill 2002 of India have also laid emphasis on inventorisation of the protected and rich biodiversity areas, so that fair assessment can be made for sustainable utilization of bioresources. Keeping these points in view, an attempt has been made by the authors to work out the plant wealth of Gandhi Sagar Wildlife Sanctuary. In order to have a complete inventory of angiospermic plants of Gandhi Sagar Wildlife Sanctuary, Madhya Pradesh extensive and intensive field tours were undertaken during 2013-2014. All the plant specimens were correctly identified and the results have been presented in the paper under enumeration.

ENUMERATION

All the species have been enumerated in alphabetical order with the correct binomial, vernacular name if any, family, habit and status of plants (Table 1).

Table 1. Angiospermic plants of Gandhi Sagar Wildlife Sanctuary, Madhya Pradesh.

S. N.	Botanical Name/ Vernacular Name	Family	Habit	Status		
				Frequent	Common	Rare
1	<i>Abelmoschus ficulneus</i> (L.) Wight & Arn. ex Wight/ Jangli Bhindi	Malvaceae	Shrub	-	+	-
2	<i>Abelmoschus manihot</i> (L.) Medik. subsp. <i>tetraphyllus</i> (Roxb. ex Hornem.) Borss./ Jangli Bhindi	Malvaceae	Shrub	-	+	-
3	<i>Abrus precatorius</i> L./ Ghughchi	Fabaceae	Climber	-	-	+
4	<i>Abutilon indicum</i> (L.) Sw./ Kanghi	Malvaceae	Shrub	-	+	-
5	<i>Acacia catechu</i> (L. f.) Willd./ Khair	Mimosaceae	Tree	+	-	-
6	<i>Acacia farnesiana</i> (L.) Willd.	Mimosaceae	Tree	-	+	-
7	<i>Acacia leucophloea</i> (Roxb.) Willd./ Reujha	Mimosaceae	Tree	+	-	-
8	<i>Acacia nilotica</i> (L.) Willd. ex Delile subsp. <i>indica</i> (Benth.) Brenan/ Babool	Mimosaceae	Tree	-	+	-
9	<i>Acacia pennata</i> (L.) Willd./ Ail	Mimosaceae	Climber	-	+	-
10	<i>Acacia torta</i> (Roxb.) Craib/ Ail	Mimosaceae	Shrub	-	+	-

DISCUSSION

The present study reveals that 502 species of angiosperms under 321 genera belonging to 85 families are found in Gandhi Sagar Wildlife Sanctuary, Madhya Pradesh. Out of these 98 species in 60 genera and 15 families belong to Monocotyledons and 404 species in 261 genera and 70 families belong to Dicotyledons.

Ten dominant families with maximum number of species found in the sanctuary are Poaceae (59 spp.), Fabaceae (52 spp.), Acanthaceae and Asteraceae (34 spp. each), Euphorbiaceae (23 spp.), Convolvulaceae (21 spp.), Malvaceae (16 spp.), Rubiaceae (15 spp.), Cyperaceae (14 spp.) and Scrophulariaceae (13 spp.).

The data further indicates that ten dominant genera

Text-figure 2. Habit-wise distribution of plants in Gandhi Sagar Wildlife Sanctuary.

with maximum number of species in the district are *Ipomoea* (10 spp.), *Euphorbia*, *Indigofera* (9 spp. each), *Ficus* (7 spp.), *Acacia*, *Corchorus*, *Crotalaria*, *Eragrostis*, *Phyllanthus* (6 spp. each) and *Alysicarpus* (5 spp.).

An analysis of life forms (Text-figure 2) has further pointed out that out of a total number of 502 species of angiosperms, 303 species are herbs, 52 species are shrubs, 91 species are trees, 53 species are climbers and 3 species are parasites.

The data of field observations have pointed out that 73 species are rare in the sanctuary as their population is represented by few individuals only. These are *Abrus precatorius*, *Alysicarpus pubescens*, *Asparagus racemosus*, *Bacopa monnieri*, *Baliospermum solanifolium*, *Bauhinia vahlii*, *Butea superba*, *Cardiospermum halicacabum*, *Careya arborea*, *Carvia callosa*, *Cassine albens*, *Catunaregam spinosa*, *Celastrus paniculatus*, *Ceriscoides turgida*, *Chlorophytum arundinaceum*, *C. tuberosum*, *Clerodendrum philippinense*, *C. infortunatum*, *Cochlospermum religiosum*, *Cordia macleodii*, *Curcuma amada*, *C. aromatic*a, *Cymbopogon martinii*, *Cynoglossum zeylanicum*, *Cullen corylifolium*, *Dalbergia latifolia*, *Dioscorea hispida*, *Diospyros montana*, *Embelia basaal*, *Eranthemum nervosum*, *Erythrina suberosa*, *Ficus microcarpa*, *Garuga pinnata*, *Gloriosa superba*,

Gmelina arborea, *Grewia tiliifolia*, *Gymnema sylvestre*, *Hymenodictyon orixense*, *Indigofera colutea*, *Ipomoea dichroa*, *I. turbinata*, *Ischaemum rugosum*, *Laggera crispa*, *Leea asiatica*, *Litsea glutinosa*, *Marsdenia tenacissima*, *Maytenus emarginata*, *M. senegalensis*, *Mitreola petiolata*, *Momordica dioica*, *Moringa concanensis*, *Mucuna pruriens*, *Muraya paniculata*, *Naringi crenulata*, *Operculina turpethum*, *Oroxylum indicum*, *Phyllanthus emblica*, *Plumbago zeylanica*, *Pterocarpus marsupium*, *Pueraria tuberosa*, *Rhynchosia capitata*, *Rothea serrata*, *Schoenefeldia gracilis*, *Semecarpus anacardium*, *Soymida febrifuga*, *Sterculia urens*, *Stereospermum chelonoides*, *Streblus asper*, *Strychnos potatorum*, *Tamilnadia uliginosa*, *Terminalia chebula*, *Uraria picta* and *Zingiber purpureum*. Thus, the present findings are highly significant as these provide the latest status of angiospermic plant wealth of the sanctuary which will be useful to botanists, foresters and planners. The results also fulfil the point given in chapter IX of the Biological Diversity Bill 2000 as well as article 7 of Convention on Biological Diversity.

ACKNOWLEDGEMENTS

The authors are thankful to forest staff of Gandhi Sagar Wildlife Sanctuary, Madhya Pradesh for providing help during field survey.
